***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The dependency of claim 12 is incomplete. Appropriate correction is required.

***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 and 12 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,144,637. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications claim packet data communications comprising: one or more packet queues, each queue carrying packet traffic for a

Art Unit: 2667

particular connection having a desired packet transfer rate; packet receiving logic for directing each incoming packet to the queue assigned to the connection over which the packet is received with the only difference between the claim of the instant invention and the claim of the patent being that the claim of the instant invention is broader than the claim of the patent and as such all the limitations of the instant application are encompassed within the limitations of the claim of the patent also the preamble of the claim of the instant invention is a method while that of the patent is an apparatus. Therefore, it would have been obvious to one of ordinary skill in the art to implement the invention of the instant application using the claims of the patent for the benefit of traffic shaping packet based data communication network.

Claims 10-11 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 7 of U.S. Patent No. 6,144,637. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications claim a switching hub comprising: one or more packet queues, each queue carrying packet traffic for a particular connection having a desired packet transfer rate; directing each incoming packet to the queue assigned to the connection over which the packet is received with the only difference between the claim of the instant invention and the claim of the patent being that the claim of the instant invention is narrower than the claim of the patent also the preamble of the claim of the instant invention is a method while the preamble of the claim of the patent is an apparatus. Therefore, it would have been obvious to one of ordinary skill in the art to

Art Unit: 2667

implement the invention of the instant application using the claims of the patent for the benefit of traffic shaping packet based data communication network.
